

Group Activity: Problems with Nick

You gave Nick his dose of amoxicillin at noon and recorded it. At 12:30, you note that Nick is scratching his arms and he is developing a rash on his arms. He is happy and playful and is not having any breathing difficulties. You notify his parent who calls his health care professional. Nick is picked up at 1:00 and is brought to the health care professional's office where he receives Benadryl[®]. His amoxicillin is discontinued and he is given a new antibiotic.

- Divide participants into groups of 2 to 4 people.
 - Participants should record the incident in the Medication Log and on the Medication Incident Report in the **Participant's Manual**.
 - If time is short, this activity can be done individually instead of in groups.
-
